

PaperMC

What is PaperMC?

- **PaperMC** is a high-performance, **Spigot-based server type** designed to provide even better performance and optimizations than Spigot.
- **Features:**
 - Built on Spigot but includes additional optimizations, bug fixes, and performance improvements.
 - More configurable settings to fine-tune performance for larger servers.
 - Supports all Spigot plugins and is fully compatible with them.

Best For:

- **Large Servers:** If you need to handle a high number of players with minimal lag.
- **Performance-Focused Servers:** Perfect for players who want the best performance, with tweaks to improve stability and speed.
- **Customization and Modifications:** Ideal for those who want to tweak server settings beyond what Vanilla and Spigot can offer.

Pros:

- **Superior Performance:** PaperMC outperforms Vanilla and Spigot in terms of resource management, reducing lag and improving TPS (Ticks Per Second).
- **Customization:** Advanced configuration settings allow you to fine-tune performance and gameplay.
- **Compatibility:** Supports all Spigot plugins, offering access to a vast plugin library.

Cons:

- **More Configuration:** Some advanced features may require more time to configure properly.
 - **Advanced Knowledge:** For best results, you might need to understand performance settings and tweak configurations for optimal performance.
