

# Purpur

## What is Purpur?

- **Purpur** is an enhanced fork of PaperMC that offers even more features and optimizations aimed at improving both performance and gameplay customization.
- **Features:**
  - Offers **even more configuration options** than PaperMC for a more tailored experience.
  - Includes experimental features for server administrators looking for cutting-edge optimizations.
  - Extends the PaperMC experience with custom features such as world generation settings, anti-lag tools, and more.

## Best For:

- **Advanced Server Admins:** If you're comfortable with tweaking server settings and want even more control over your server's behavior.
- **Highly Customizable Servers:** Great for those who want a personalized gameplay experience and enhanced features.
- **Cutting-Edge Performance:** Ideal for high-traffic servers with complex setups requiring the best possible performance.

## Pros:

- **Extensive Customization:** More configuration options than PaperMC, allowing for a truly custom server setup.
- **Enhanced Features:** Includes experimental features that can optimize server performance in unique ways.
- **Performance:** Similar to PaperMC, Purpur is highly optimized for better performance with large player bases.

## Cons:

- **Complexity:** Requires more advanced knowledge to configure and maintain than PaperMC.

- **Experimental Features:** Some features may be less stable as they are still in development.
-
