

Connecting

Step 1: Create a New Connection in DBeaver

1. **Open DBeaver.**
 2. Click **File > New > Database Connection** or press `Ctrl + N`.
 3. In the **Select Database** window, choose **MySQL**, then click **Next**.
 4. Enter your database connection details:
 - **Host:** Your database's hostname or IP address.
 - **Port:** `3306` (or the custom port if specified).
 - **Database:** The name of your MySQL database.
 - **Username:** Your database username.
 - **Password:** Your database password.
 5. Click **Test Connection** to ensure everything is correct. If successful, proceed to the next step.
-

Step 2: Save and Connect

- Click **Finish** to save the connection.
 - In the **Database Navigator**, locate your new connection and expand it to access tables, schemas, and other database objects.
-

Additional Notes

- If you experience connection issues, verify that your database host allows external connections. Some providers require you to whitelist your IP address.
 - Ensure that your firewall or security groups do not block MySQL's default port (`3306`).
-

Additional Help

If you encounter any issues or need further assistance, open a support ticket via the [Billing Area](#).

Our support team is ready to assist you.
