

# Setting a Player as Operator

**Be careful who you set as an operator.**

Setting a player as an operator gives them significant control over your server. Operators can modify game settings, manage other players, and potentially disrupt gameplay if not managed responsibly. Only set players you trust as operators to avoid any potential issues.

## Setting a Player as Operator via the Console

### 1. Log into Your Server Control Panel:

- Open your web browser and go to [panel.ridgelineservers.com](https://panel.ridgelineservers.com).
- Enter your login credentials to access the control panel.

### 2. Access the Console:

- Once logged in, select your Minecraft server from the list of available servers.
- Navigate to the **Console** section in the control panel.

### 3. Enter the Command:

- In the console input field, type the following command:

```
op <playername>
```

Replace `<playername>` with the actual Minecraft username of the player you want to set as an operator.

### 4. Verify the Op Status:

- Look for a confirmation message in the console indicating the player has been granted operator status. It will typically say something like "Made a server operator".

## Setting a Player as Operator via In-Game Commands

### Step-by-Step Guide

#### 1. Join the Server:

- Log into your Minecraft server with a player account that already has operator status.

## 2. **Open the Chat Window:**

- Press **T** or **/** to open the chat window.

## 3. **Enter the Command:**

- Type:

```
/op <playername>
```

Replace `<playername>` with the username of the player you wish to set as an operator.

## 4. **Confirm the Op Status:**

- You should receive a confirmation message in the chat indicating that the player has been set as an operator.
